## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 11, 14-18 and 20-29 are rejected under 35 U.S.C. 102(b) as being anticipated by Weisenbach (U.S. Patent No. 1,789,060).

Weisenbach discloses a system comprising a chassis (12) and one or more fixation elements (8) in the form of screws or pins. The fixation elements are connected to the chassis by frictional engagement with the chassis caused by the tightening of the nut (26) to prevent axial, rotational and angular movement of the fixation element relative to the chassis. The fixation elements are to be received in a bone structure and are screwed into the chassis and bone structure in such a way that screws move equidistantly in the chassis and the bone structure to produce a force neutral form. There are also no axial forces transferred to the screws after fixation. The chassis is received in a rigid bracing wherein the chassis is made of two parts received displaceable in an axial direction in relation to each other in the bracing that cap is formed between the two chassis parts (12 and 15). This device is placed at a distance from and not in contact with the underlying bone structure or skin (see figure 1). The chassis is fixed to both sides of the fracture whereby a bridge span (26) is formed between bone fragments of the bone.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13 and 19 are rejected, as understood, under 35 U.S.C. 103(a) as being unpatentable over Weisenbach (U.S. Patent No. 1,789,060).

Weisenbach discloses the claimed invention except for the chassis being made of ultra high molecular weight polyethylene or the bracing being made of steel. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have created the chassis with ultra high molecular weight polyethylene or the bracing rod of steel, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. In re Leshin, 125 USPQ 416.

***Response to Arguments***

Applicant's arguments with respect to claims 11 and 13-29 have been considered but are moot in view of the new ground(s) of rejection.
